

This diagram represents a clinical rule based on NQF 0068 | PQRS 204:

Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic

Patients 18 years and older with ischemic vascular disease who were discharged alive for acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) from January 1-November 1 of the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year and who had the following during the measurement year. -Use of aspirin or another antithrombotic.

The clinical concepts of AMI, CABG, IVD, Antithrombotic medications and Aspirin are defined by specified value set groupings published by NCQA, and maintained by the NLM Value Set Authority Center.
